

## Safe Riding Tips

- **Use hand signals**

- **Ride with traffic.**

- Some people think you're supposed to ride against traffic, or that it's safer—*it's not!* You're more likely to get hit at intersections and in driveways.

- **Communicate with pedestrians and bicyclists!**

- Coming up on pedestrians or passing another bicyclist? Yell, "On your left!" before passing them on their left side, or "coming up behind you!"

- **Ride in the street whenever possible. Stay to the right. Use hand signals.**

- It's generally unsafe to ride on the sidewalk (and technically illegal for anyone over 14), but it may sometimes be safer than riding in heavy traffic if you're not a confident bicyclist

## Safe Riding Tips

- **Making a left turn? You can...**

1. Take the lane and turn like a vehicle (using hand signals!).
2. Go to the corner of the intersection and cross with traffic.
3. Go to the corner of the intersection and cross as a pedestrian (walking your bike).
